

Senior backend engineer with 10+ years building game server systems at scale. I focus on solving problems — performance bottlenecks, deployment automation, system security — not memorizing frameworks. My workflow is AI-first: I use Claude Code as my primary development tool, supplemented by Codex, for architecture design, code review, and rapid development across any tech stack.

Core Competencies

Game Server Architecture
Designed multi-server systems (Gate/Lobby/Game) and built reusable game frameworks that significantly cut development cycles for new titles.

Lua/Skynet, Golang, TCP/WebSocket, gRPC

Database & Cache Optimization
Diagnosed full-collection scans on ~2.7M records/day and designed compound indexes. Restructured Redis key architecture to eliminate excessive SCAN operations.

MongoDB, Redis, MySQL, PostgreSQL

DevOps & CI/CD
Automated Docker image builds to Harbor registry, designed Helm chart deployments on Kubernetes, set up GitLab Runners and remote SSH deployments.

Kubernetes, Docker, Helm, GitLab CI/CD

Security & Data Integrity
Investigated Redis data tampering incidents, traced attack vectors to vendor directory vulnerabilities, implemented AES encryption + checksum verification.

Employment History

• Senior Server Engineer	· Tyche Tech Co, Ltd	Jan. 2021 — Present
• Senior Server Engineer	· Terpro Mobile Co, Ltd	Jun. 2019 — Dec. 2020
• Senior Backend Engineer	· WistronITS Corp. Stationed: Taiwan Mobile	Sep. 2016 — May 2019
• Software Engineer	· Kangda Info Corp.	Jul. 2015 — Aug. 2016
• Software Engineer	· BenQ Corp.	Nov. 2013 — Feb. 2015
• Software Engineer	· Fashion Intelligence Co, Ltd (Open-Life)	Nov. 2011 — Oct. 2013

Piecework Project

• PGS Game Server (solo)	Dec. 2022 — Apr. 2023
• Yapro car tax refund management (2 members)	Jan. 2021 — Mar. 2021
• Muxin CarePro CMS (5 members)	Nov. 2013 — Mar. 2015

Education

Bachelor of Electrical Engineering — National Kaohsiung University of Science and Technology(NKUST), Taiwan	Sep. 2006 — Jun 2010

AI-Augmented Development

AI is not a tool I list on my resume — it's how I work. Specific technologies matter less when AI enables rapid adaptation to any stack.

- Daily workflow: architecture design, code generation, debugging, and code review through Claude Code, with Codex as supplement
- Cross-stack delivery: 10+ years of hands-on experience across Golang, Java, Lua, JavaScript — combined with AI, enables rapid context-switching and delivery across stacks
- Built this resume site (Vue 3 + Vite + Tailwind CSS) entirely through AI-assisted development
- Use AI to accelerate team mentoring — guided junior engineers with AI-assisted code review and test case writing
